He said both – first 1200 and that he thought it was more like 200. It's actually 587!

Martin said 200 per minute, not 1200.

An acidic, yellowish discharge still was leaking out of the Gold King Mine portal, about 60 miles north of Durango (population 17,000), at an estimated rate of about 1,200 gallons a minute, state and federal officials said. EPA crews at the mine were trying to create a large hole to catch the contaminant-laced wastewater and try to clean it before it reaches streams and rivers.
